

Leader's Answers Check Your Understanding

Nutrition Risk Criteria (NRC) Revisions

ID WIC Program: Effective Oct. 1

Below are **answers** to the scenarios/questions from the Check Your Understanding Nutrition Risk Criteria (NRC) Revisions page:

- I. (The specific weight measurements in WISPr show okay growth so risk *135 Slowed Faltering Growth Pattern* doesn't apply.) You document the baby's weight history concern in the assessment interview or care plan.
- II. Same answer as above.
- III. You don't manually assign risk *352.1 Infectious Diseases Acute* because there's no diagnosis by a health care provider. You document the health concern in the assessment interview or care plan.
- IV. You assign risk *352.2 Infectious Diseases Chronic* and document there was a doctor's diagnosis of Hepatitis A (either in the assessment interview or the care plan).
- V. You assign risk *359 Recent Major Surgery, Physical Trauma, Burns* and document that a health care provider diagnosed a concussion/broken bones from a car accident (either in the assessment interview or care plan).
- VI. You don't assign risk *411 (411.8) Inappropriate Nutrition Practices Infant* because the baby isn't being fed a strict vegan diet. You document the foods the baby routinely eats in the assessment interview.
- VII. You don't assign risk *411 (411.9) Inappropriate Nutrition Practices Infant* because the amount of fresh breast milk being added is less than the amount of frozen breast milk.
- VIII. You assign risk *411 (411.9) Inappropriate Nutrition Practices Infant* and document the mom isn't following the doctor's instructions to boil bottles (either in the assessment interview or the care plan).
